

RECYCLING GUIDE: That's allowed in!

Packaging, Tetra Pak,
styrofoam

Toys

Plastic and metal

Buckets, watering cans,
flower pots

Tools, screws,
nails

Pots, pans,
cutlery, taps

Tins, aluminium trays

That's not allowed in!

Batteries, lamps,
electrical devices,
glass

Bio-waste,
residual waste

Cardboard, paper, old
clothes, shoes,
wood

TIP:

To optimally use the container volume, please throw plastic and metal waste loosely into the recycling bin. If you want to recycle large bulky plastic or metal objects, you can still hand these over for free to the ASP recycling centres (max. quantity accepted: 1 m³).

Hi, cool bin!

The new recycling bin's here.

Emptying from January 2016

The recycling bin will be launched from January 2016 everywhere in the town and the Paderborn region. The 'yellow bag' has now become a veteran after more than 20 years.

Introducing the robust container with a yellow top makes separating waste even easier for you and collection cleaner and more convenient. As well as the plastic, metal and composite packaging collected for many years in the yellow bag, all other metal and plastic objects can now be disposed of in the future using this recycling bin. From now on you don't need to think any more about whether a broken bucket or old metal keys are allowed to be disposed of in the 'yellow bag' – now all plastic and metal parts can be put into the new recycling bin.

This regulation makes sense with a view to material and energetic recycling, and is a further important step towards expanding the protection of resources and the sustainable recycling economy. This is the reason why collecting all plastic and metal waste is established by legislation.

ADVANTAGES:

Launching the recycling bins means that the unstable, torn 'yellow bags' now finally belong to the past. Collecting metal and plastic objects with the robust containers is not only more convenient but also much more hygienic. Please see the recycling guide to find out what should be put in and what not. For details and background information, see meine-wertstofftonne.de.

What does the recycling bin cost?

Because a major part of costs continues to be covered with the license fees of packaging, expect costs of no more than 2 euros per person/year.

How often is the recycling bin emptied?

Every 4 weeks. Please see the current waste calendar or the app mymuell.de for the emptying day.

What should I do if the bin isn't big enough for the rubbish?

If the volume isn't suitable in the long run, the property owner can order a further recycling bin.

What sizes do the recycling bins come in?

Experience from our model testing in Elsen has shown that a 240 l container is appropriate for most properties and is usually sufficient for 4-5 person households. In addition to this standard container, there's also a 1,100 l container.

Can I share my recycling bin with a neighbour?

This is possible in principle. For more information, please see your ASP service centre.

I've still got 'yellow bags'. Am I allowed to still use these and put them out for collecting next to the recycling bin?

No. Because emptying the recycling bins is mainly carried out with automatic side loaders, collection is fundamentally intended in the containers. If, in exceptional cases, not all rubbish fits in the container, you can bring this to the ASP recycling centres.

Can I refuse the recycling bin?

No, fundamentally not. The recycling bin will become a further waste container with compulsory connection and usage from 01.01.2016.
